

**INFANT
SIBLING
STUDY**

The goal of the **Infant Sibling Study** is to understand the very earliest manifestations of autism and ADHD in infancy, using prospective methods to track the onset of symptoms and better understand underlying mechanisms that might put infants at risk of developing autism or ADHD.

RESEARCH ASSISTANT 1-Year Internship

Infant Sibling Study volunteer research assistant responsibilities include:

- Behavioral assessment preparation and video recording assessments of infants and school-age children
- General data entry and filing
- Behavioral Coding
- Scoring of developmental assessments

We are looking for interns who are:

- Detail-oriented
- Motivated
- Work well independently and as part of a team

Students and non-students are welcome to apply. The internship is a commitment of 9 hours/week. The position is unpaid; however, it comes with many intrinsic benefits.

*Transcript Notation and course units offered for UC Davis students.
